

CropGenome-FM v2: 字符级、反向互补等变、Hyena-稀疏注意力混合架构

369,505,287 trainable parameters | 8,192-bp frozen base | 65,536-bp architecture gate

Current objectives

MLM (weight 1.0) + symmetric RC KL consistency (0.02) + window-level region classification (0.05). Stage C1 uses gradient checkpointing for 64K sequences.
